Note | Information for July 2010 available by August 24, 2010 is included. This Report is focussed on the performance of the financial system, including breakdowns by homogeneous sub-sectors. The data reported (particularly, those referring to profitability are provisional and are subject to changes later. Except the opposite was indicated the data included corresponds to BCRA Information Regimes (end of month data)

Summary

- During July the dynamism of private sector deposits and lending continued to increase as the growth of bank intermediation with companies and households gained strength in the context of declining loan portfolio delinquency. Bank operating structure has continued to grow steadily. Bank payroll have risen by 2.2% year-on-year (y.o.y.), a variation accounted for mainly by private financial entities.
- Financial system foreign currency mismatching (which includes net undeliverable foreign currency term purchases) fell in July to 37.2% of net worth. Furthermore, the proportions of both private sector loans and deposits that are denominated in foreign currency remain relatively low (just 15% and 20% of the respective totals), with the former mainly being directed to tradable sectors.
- Balance sheet lending to the private sector went up 2.2% in July, driven by commercial lines. Export credit lines were the most dynamic, followed by leasing and promissory notes. As a result, lending to companies and households has risen by an annualized (a.) 27% in the first 7 months of 2010, well in excess of the growth seen in the same period last year (5%a.). In the first months of the year lending to the corporate sector increased its growth rate compared with the same period of 2009, reflecting the effects of an increase in credit for almost all sectors of the economy. Loans to households have also shown signs of greater dynamism over the year to date, mainly from the performance of consumer credit.
- Private sector loan non-performance reached 2.9% of loans in June (the latest figure available), a total drop of 0.6 p.p. in 2010. This development took place mainly among non-bank financial entities and private banks because of the improved performance of their consumer credit portfolios. Financial system non-performing portfolios continue to record high levels of coverage by means of provisions (139%).
- In July the bank liquidity ratio (including items in both local and foreign currency) declined slightly to 28.8% of deposits, from lower minimum cash compliance and, to a lesser extent, from the lower net stock of repos with the Central Bank. The broad liquidity indicator (which includes Lebac and Nobac not linked to repos with the Central Bank) amounted to 43.5% of total deposits.
- Financial system balance sheet total deposits fell back slightly in July (-0.4%) reflecting the effect of a drop in deposits from the public sector. The sock of non-financial private sector deposits rose 1.5% compared with June (24.8% y.o.y.), driven mainly by time deposits.
- Financial system consolidated net worth went up 2.6% in July, mainly from monthly book profits. The capital compliance ratio rose moderately during the month, to 17.8% of risk-weighted assets.
- Accrued profits for July (3.8%a. of assets) were higher than those for June, mainly because of the increased gains on securities and higher net interest income. All bank groups increased their profits for the month, with a notable performance in the case of foreign private banks. Accumulated results for the year show book profits equivalent to 2.5%a. of assets, 0.4 p.p. higher than in the first 7 months of 2009. Compared with last year, some increase has been noted in financial system leverage as a result of the greater relative growth of assets compared with that for net worth. As a result, financial system ROE totaled 21.2%a. between January and July, higher by 3.5 p.p. than in the same period of 2009.

¹The share of loans to the private sector in terms of total assets is 38.1%

Activity

Growth in bank financial intermediation with the private sector is gaining strength

Financial intermediation with the private sector continued to show an increasing growth rate in July, in line with the performance observed in recent months. Corporate and household loans and deposits showed greater dynamism than that seen twelve months earlier, and the outlook for coming periods is positive (see Chart 1). Growth in private sector lending stocks reached 21.3% y.o.y., while company and household deposits have risen by 24.8% y.o.y. Bank netted assets rose 0.2% for the month, accumulating an increase of 22.6% y.o.y.

This recent growth in financial intermediation was accompanied by rising employment in the sector (see Chart 2). Bank staffing has risen 2.2% y.o.y., mainly in the private bank sector.

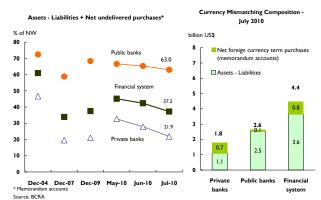

Higher lending stocks to households and companies led the growth of netted assets in July. As a result, there has been an increase in the share of lending to the private sector for the third month in succession, to a level of 40.7%¹ of netted assets. This monthly increase mainly reflects the development of national private banks' lending, and to a lesser extent, that by public banks (see Chart 3). Financial entities reduced their liquid assets in July to 22.3% of netted assets (33.8% when including Lebac and Nobac not linked to repo transactions).

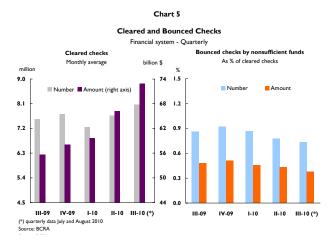

The principal source of financial system resources (estimated on the basis of changes in balance sheet stocks) has been a drop in liquid assets (\$7.7 billion) and to a lesser extent, an increase in private sector deposits (\$3.4 billion). In the case of the uses of resources, there has been a reduction in public sector deposits following the payment of debt servicing (approximately \$4.3 billion), as well as an increase in lending to the private sector (\$4.0 billion) and in Lebac and Nobac holdings not related to repos with the Central Bank (\$1.9 billion). Whereas private banks accounted for most of the monthly growth in private sector loans and deposits, the drop in liquidity took place mainly in public banks.

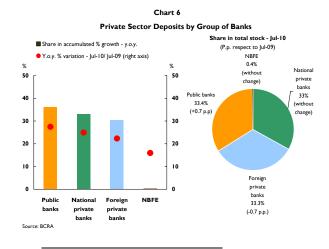

Financial system foreign currency mismatching (including net foreign currency term purchases with undeliverable underlying assets) fell almost US\$500

Chart 4

million in June to US\$4.5 billion, equivalent to 37.2% of net worth (see Chart 4). This change for the month was mainly due to a drop in net foreign currency term purchases by private banks.

The ratio of bounced checks by nonsufficient funds to total cleared checks continues to decline, at the same time as the volume of traded documents has been gradually increasing (see Chart 5). In the first 8 months of 2010 61 million checks were cleared (4.8% y.o.y.), for an amount of \$523 billion (23.5% y.o.y.). In August, bounced checks for nonsufficient funds represented 0.72% of the total (equivalent to 0.37% of the amount cleared).

Deposits and liquidity

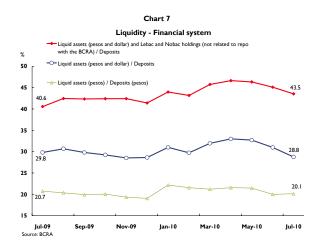

Private sector deposits have risen in the context of a gradual reduction in liquidity

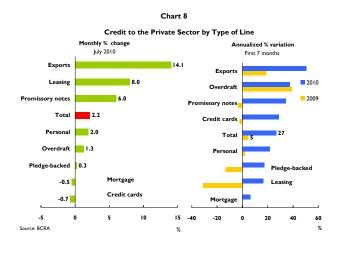

Balance sheet financial system deposit stocks were down slightly in July (-0.4%). This movement was largely explained by a reduction in public sector deposits (-4.2%), mainly from the transfer of funds to the Central Bank for the payment of servicing on the Boden 2012 issue that took place in August. Nevertheless, the growth in public sector deposits has been 41% y.o.y. Private sector deposit stocks were up 1.5% compared with June (24.8% y.o.y.), driven mainly by time deposits. Interest rates on peso time deposits in the wholesale and retail segments remained relatively stable during the month, and were lower than one year earlier.

Public banks and national private banks accounted for most of the year-on-year growth in non-financial private sector deposits (see Chart 6). During this period, most deposit-taking entities recorded an increase in their funding through deposits from the private sector (13 private and public banks accounted for almost 90% of this variation).

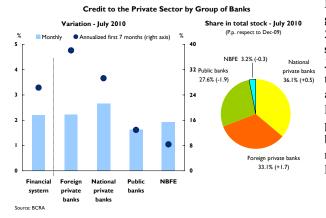

Financial system liquid assets were down during the month, mainly because of the lower foreign currency minimum cash compliance, and to a lesser extent, because of the decline in net repos with the Central Bank. The liquidity indicator including items in national and foreign currency fell by 2.2 p.p. of total deposits in June, to $28.8\%^2$ (see Chart 7). The broad liquidity indicator including Lebac and Nobac not related to repos with the Central Bank stood at 43.5% of deposits, almost 3 p.p. above the level of 12 months earlier. Both public

² Peso liquidity held steady at 20.1% of total deposits in national currency, lower than the level at July 2009.

and private banks lowered their liquidity indicators for the month.

The average daily volume traded on the call money market dropped in August, reaching \$860 million. The average interest rate weighted by trading volume remained almost unchanged at 9.2% compared with the previous month.

Financing

Commercial credit lines were behind the monthly growth in lending to the private sector

Balance sheet lending stocks to households and companies rose by $2.2\%^3$ in July, mainly driven by commercial lines. Export credit lines were the most dynamic, followed by leasing and promissory notes (see Chart 8). As a result, total lending to the private sector has risen by 27% a. in the first 7 months of 2010, well in excess of the figure recorded in the same period of the previous year (5% a.), a consequence of the overall improvement in the performance of the various loan lines. There was a particular surge in the growth rate for promissory notes, credit cards, leasing and pledge-backed loans, which had posted a decline in the first part of 2009.

While all groups of financial entities posted an increase during the month in lending to the private sector, notable dynamism was displayed by private banks (national and foreign). This group of banks has continued to gain share of total lending to the private sector (see Chart 9).

In the year to date, bank lending to companies⁴ has grown at a faster rate that in the same period of 2009. This improvement was seen for almost all sectors of the economy (based on information as at June, the latest figure available) (see Chart 10). Loans to the manufacturing sector and service companies accounted for over 70% of the growth in corporate lending in 2010 to date, loans to the former being provided by means of promissory notes, and to the latter by means of overdrafts. As a result, manufacturing has remained the sector with the largest share of total lending to companies.

³ If the balance sheet total is corrected for the monthly issue of financial trusts, the variation in lending to the private sector would reach 2.4%. During July there were 3 financial trust issues using bank loans as underlying assets for a total of \$392 million, of which \$273.5 million corresponded to securitization of mortgage loans, and \$118.5 million to securitization of personal loans.

⁴ Loans to companies are those granted to legal persons and commercial loans granted to individuals; remaining loans to individuals are considered within the households heading.

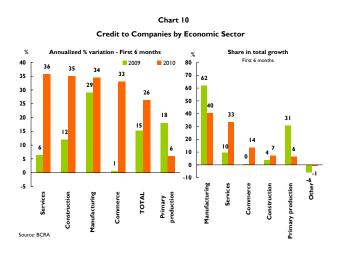

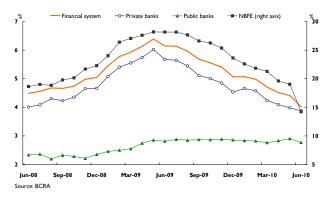

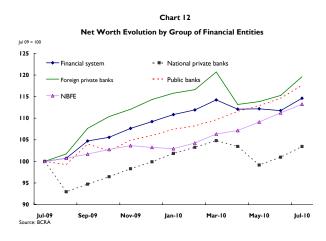

Chart II

Non-performing Consumption Credit to Households by Group of de Banks Non-performing portfolio / Total financing

When lending to the corporate sector is broken down into residual stock segments, it can be seen that in the first 6 months of 2010, the segment for over \$5 million recorded the greatest dynamism (growing by 37% a.), at the same time as being the segment making the greatest contribution to lending growth (accounting for almost three-quarters of the total). The smaller segments (under \$5 million) grew by 15% a.

Loans directed at households were up 23%a. in the first few months of the year (to June 2010, the latest date for which information is available), being driven mainly by consumer credit (28%a.). Loans granted by means of credit cards and personal loans together, explained over 80% of the increase in the total balance sheet stock of lending to households over the course of 2010. In the case of collateralized loans, there has been renewed dynamism by pledge-backed loans, while mortgage loans have shown only a modest increase.

Private sector loan non-performance stood at 2.9% of total lending in June (latest information available), accumulating a drop of 0.6 p.p. in 2010. This improvement in loan quality in recent months has mainly taken place in non-bank financial entities and private banks, basically as a result of improved performance by their consumer loan portfolios (see Chart 11). Coverage of the non-performing portfolio by provisions reached 139% in June, 21 p.p. above the value recorded 12 months earlier.

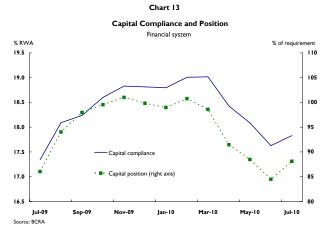

Financial system exposure to the public sector reached 13.3% of assets in July, slightly below the level recorded in the same month of the previous year. If total official sector deposits are taken into account, the Government continues to be a net creditor of the financial system (9% of total assets).

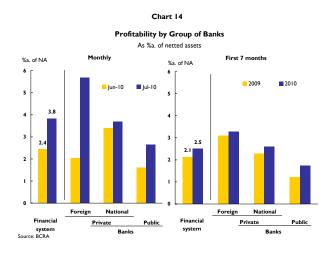

Solvency

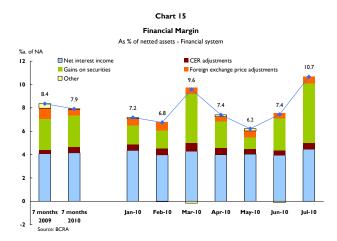

Financial system solvency improved, mainly as a result of the book profits recorded

Financial system consolidated net worth went up 2.6% in July, led by the book profits obtained. All banks groups, and foreign private banks in particular, posted increases in net worth (see Chart 12). In the last year, financial system net worth has shown a growth rate of 14.6%.

Within the context of a growing volume of financial intermediation with the private sector and expansion in net worth, financial system capital compliance went up by 0.2 p.p. of risk-weighted assets (RWA) in the

month, to 17.8%. Excess capital compliance rose in July (see Chart 13), to 88% of the regulatory requirement.

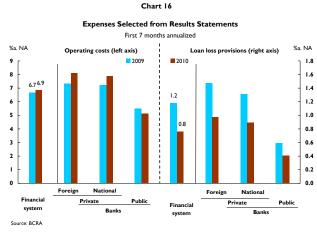

During the month financial entities accrued book profits for 3.8%a. of assets, an increased compared with June, mainly from the improvement in financial margin. All groups of banks increased their profits, with a notable performance being recorded by foreign private banks (see Chart 14). Over the course of 2010 financial system profits have amounted to 2.5%a. of assets, 0.4 p.p. more than in the same period of 2009.

Financial margin went up 3.3 p.p. of assets in July to 10.7%a., mainly because of higher gains on securities (2.3 p.p. of assets, to 5.1%a.) and from net interest income (0.6 p.p. of assets, to 4.5% a.). The trend recorded by these financial margin components was widespread across all banks, with a notable increase in gains on securities recorded by public and foreign private financial entities, while net interest income showed greater relative growth in public banks. The remaining financial margin components (foreign exchange rate adjustments, CER adjustments and other financial results) rose slightly in July. In the total for the year at date, there has been a year-on-year decline of 0.5 p.p. of assets in the financial margin to 7.9% a., mainly because of the lower weighting of headings linked to the evolution of the nominal peso-dollar exchange rate (see Chart 15).

Service income was down 0.1 p.p. of assets in July, totaling 3.9%a. This slight reduction was explained by public banks and national private banks. In the first 7 months of 2010 this revenue was approximately equal to that of the previous year, at around 3.8%a. of assets, reinforcing its place as the second most important source of financial system results (after net interest income).

Operating costs dropped 0.3 p.p. of assets in the month, to 6.8%a., a movement that took place mainly in private banks. During the year this expenditure has risen slightly compared with the same period of 2009 (see Chart 16). It should be mentioned that **this expenditure remains more than covered by net interest income and service income margin**, with a coverage ratio of 117%, almost the same as 12 months earlier.

Loan loss provisions were lower by 0.1 p.p. of assets in July, to 0.7%a., mainly in public banks. Over 2010 to date there has been a year-on-year drop of 0.4 p.p. of assets in the case of these provisions, to 0.8%a. This reduction kept pace with the decline in the non-

performance ratio for the portfolio of lending to households and companies.

It is estimated that during August the financial system will preserve its solvency levels following the recording of further book profits. As financial intermediation with the private sector increases, it is expected that income from traditional banking activity will record notable dynamism. In addition, gains on securities are expected to remain at a relatively high level, while loan loss provisions will continue to lose weight in the statement of income (in line with declining levels of non-performance).

Latest regulations

This section contains a summary of the main regulations related to the business of financial intermediation issued during the month (referenced by the date on which they came into force).

Communication "A" 5106 - 07/26/10

Setting up, operation and expansion of financial entities. A section has been added separating the executive and board functions of financial entities, depending on the category of bank to which the entity belongs: i) Group A: banks with deposits greater than or equal to 1% of total financial system deposits, in which case the two functions should be kept separate; ii) Group B, banks with deposits not exceeding the amount established for Group A and that do not belong to Group C, in which case the SEFyC will provide information for consideration by a Committee for Evaluation of Suitability and Experience, which will decide whether or not a separation of functions will be required based on the characteristics of the entity and the background of the persons and their positions; iii) Group C entities for which deposit totals do not exceed 0.25% of total financial system deposits and/or which when not included in Group A have a ratio of deposits to adjusted stockholders' equity of less than 100% will not be required to segregate executive and board functions, it being left to the entity which criterion should be adopted, according to the business and operating activities it performs.

Communication "A" 5107 - 07/30/10

Setting up, operation and expansion of financial entities. It is established that banks classified as wholesale banks may perform all lending, deposit and service operations that the law and regulations establish for retail banks, but may only receive deposits from the Argentine financial sector and foreign banks. In the case of public banks granting medium and long-term financing for productive activities and foreign trade, these may also receive deposits from international credit agencies and investors making deposits in accordance with the rules on "Deposits and term investments" for amounts of not less than \$2 million or \$1 million (or its equivalent in other currencies) per individual transaction and for terms of not less than 180 or 365 days respectively.

Methodology

- (a) Aggregate balance sheet information is taken from the monthly accounting information system (unconsolidated balance sheets). In order to calculate aggregate data for the financial system, for financial entities that have not provided data for the month reviewed, the most recent information available is repeated in the aggregate balance sheet. On the other hand, for profitability analysis only the banks providing data for that month are considered.
- (b) Due to possible lack of data for some banks at the time this Report was drafted, and due to possible corrections to the data provided by financial entities later, the data included is of a preliminary nature –particularly for the last month included. Therefore, and due to the fact that the most recent data available always used, data in connection with earlier periods may not match what was mentioned in earlier issues of the Report. In such cases, the latter release should be regarded as being of better quality.
- (c) Unless otherwise indicated, data about deposits and loans refer to balance sheet information, and do not necessarily agree with those compiled by the Centralized Information Requirement System (SISCEN). Reasons for discrepancies include the precise date considered in order to calculate monthly changes and the items included in the definition adopted in either case.
- (d) Profit ratio calculations are based on monthly results estimated from changes in the aggregate result amounts during the current fiscal year. Unless otherwise specified, profit ratios are annualized.
- (e) Initially, the breakdown by group of banks was determined based on majority decision making role –in terms of voting rights at shareholder meetings distinguishing between private sector financial entities and public sector banks. In order to increase depth of the analysis, private sector entities were also classed according to the geographic and business scope of their operations. Wholesale banks were therefore defined as those specializing in the large corporations and investor sector, which in general do not rely on deposits from the private sector for their funding. On the other hand, retail banks were divided into those carrying out business nationwide, those located in certain geographic regions –municipalities, provinces, or regions- and entities that specialize in a financial sector niche market –usually smaller entities-. Finally, it is worth noting that the classifications defined above are solely for analytical purposes and does not mean it is the only methodology criteria by which to group them; while on the other hand, the listing of features for each financial entity group has been established in a general manner.
- (f) Indicators exhibited in Tables 1 and 5 of Statistical Appendix: 1.- (Paid in liquidity at the BCRA + Other cash holding + Holdings of BCRA securities for repo transactions in cash) / Total deposits; 2.- (Position in government securities (not including Lebac nor Nobac) + Loans to the public sector + Compensations to be received) / Total assets; 3.- (Loans to the non-financial private sector + Leasing operations) / Total assets; 4.- Irregular portfolio with the non-financial private sector / Loans to the non-financial private sector; 5.- (Total irregular portfolio Bad loan provisions) / Equity. The irregular portfolio includes loans classed in situations 3, 4, 5 and 6; 6.- Cumulative annual result / Average monthly netted assets % annualized; 8.- (Financial margin (Net interest income + CER and CVS adjustments + Gains on securities + Foreign exchange price adjustments + Other financial income) + Service income margin) / Cumulative annual operating costs; 9.- Paid in capital (Calculated Equity Requirement) / Risk weighted assets, according to the BCRA rule on minimum capital; 10.- Total capital position (Paid in capital less requirement, including flexibilities) / Capital requirement.

Glossary

%a.: annualized percentage.

%i.a.: interannual percentage.

Adjusted profit: Total profit excluding payments made due to court-ordered releases and adjustments to the valuation of public

sector assets according to Com. "A" 3911 and modifications.

ASE: Adjusted stockholders' equity, for RPC in Spanish. The measure for compliance with bank capital regulations.

Consolidated (or aggregate) assets and liabilities: Those arising from excluding operations between financial entities.

Consolidated result: Excludes results related to shares and participations in other local financial entities.

CEDRO: Certificado de Depósito Reprogramado. Rescheduled Stabilization Coefficient.

Financial margin: Income less outlays of a financial nature. Includes interest income, gains from securities, CER/CVS adjustments, exchange rate differences and other financial results. Does not include the items affected by Com. A 3911.

Gains from securities: Includes income from government securities, short-term investments, corporate bonds, subordinated debt, options and from other income from financial intermediation. In the case of government securities, it includes the results accrued from income, quotation differences, exponential increase on the basis of the internal rate of return (IRR), and from sales, as well as the charge for impairment to value.

Income from services: Commissions collected less commissions paid. Includes commissions on liabilities, credits, securities, guarantees granted, rental of safe deposits boxes and foreign trade and exchange transactions, excluding in the case of the latter results from the trading of foreign currency, which are recorded in the "Exchange difference" accounts (here included under the heading "Other financial results"). Outflows include commissions paid, contributions to the Banking Social Services Institute (ISSB), other contributions on service income and charges accrued for gross income tax.

Interest income (interest margin): Interest collected less interest paid on financial intermediation, on an accrual basis – taken from balance sheet – rather than on a cash basis. Includes interest on loans of government securities and premiums on repos and reverse repos.

Lebac and Nobac: Bills and notes of the BCRA.

Liquid assets: Minimum cash compliance – cash, current account at BCRA and special accounts in guarantee – and other liquid items (mainly correspondent accounts) plus repo position in cash with the BCRA.

Liquidity ratio: Liquid assets as a percentage of total deposits.

mill.: million.

NBFE: Non-banking financial entity.

Netted assets (NA) and liabilities: Those net of accounting duplications inherent to the recording of repurchase agreements, term transactions or unsettled spot transactions.

Net worth exposure to counterpart risk: Non-performing portfolio net of allowances in terms of net worth.

Non-performing portfolio: Portfolio in categories 3 to 6, as per the debtor classification system.

Operating costs: Includes remuneration, social security payments, services and fees, miscellaneous expenses, taxes and amortization.

ON: Corporate bonds (Obligaciones Negociables).

OS: Subordinated debt (Obligaciones Subordinadas).

Other financial results: Income from financial leasing, adjustments to valuation of credit to the public sector, contribution to the deposit guarantee fund, interest on liquid funds, difference in market price of gold and foreign exchange, premiums on the sale of foreign currency and other unidentified income (net).

PN: Net worth (Patrimonio Neto).

p.p.: percentage points.

Private sector credit: Loans to the private sector and private sector securities.

Public sector credit: Loans to the public sector, holdings of government securities, compensation receivable from the Federal Government and other credits to the public sector.

Quotation differences: Income from the monthly updating of foreign currency-denominated assets and liabilities. The heading also includes income arising from the purchase and sale of foreign currency, arising from the difference in the price agreed (net of direct costs generated by the transaction) and the book value.

ROA: Net profits as a percentage of netted assets. When referring to accumulated results the denominator includes the average netted assets for the reference months.

ROE: Net profits as a percentage of net worth. When referring to accumulated results the denominator includes the average net worth for the reference months.

RPC: Adjusted stockholder's equity, calculated towards meeting capital regulations. (Responsabilidad Patrimonial Computable)

RWA: Risk weighted assets.

SME: Small and Medium Enterprises.

US\$: United States dollars
