Executive Summary

The world and domestic economies are struggling to gradually recover from the health and economic effects of a profound crisis caused by the COVID-19 pandemic, with consequences on trade and capital flows at global and local levels. Over the last few months, the BCRA has been improving foreign exchange regulations in order to promote a more efficient allocation of foreign currency. In this context, financial institutions' clients purchased USD247 million in the forex market. The BCRA sold USD72 million and made net payments through the local currency payment system (SML) for USD85 million. In turn, financial institutions sold USD90 million.

The "Real Sector" was a net seller of foreign currency for USD311 million. Within this group, the "Oilseeds and Grains" sector was the main net seller in the forex market with net inflows for USD2,572 million, up 49% y.o.y.

The "Real Sector excluding Oilseeds and Grains", on the other hand, was a net purchaser of foreign currency, with a total of USD2,261 million. The foreign currency thus purchased was mainly allocated to make payments for imports of goods and services, and to pay financial debt.

"Natural Persons" made net purchases totaling USD421 million for payments on cards to non-resident suppliers (USD201 million) and for saving purposes (USD169 million).

"Institutional Investors and Others"—both residents and non-residents—made net purchases for USD154 million in December.

The foreign exchange current account, which includes flows from net exports of goods and services, as well as primary and secondary income, recorded a deficit of USD44 million. This result was explained by a deficit in "Services" (USD714 million), "Primary Income" (USD383 million), and "Secondary Income" (USD7 million), which were partially offset by net inflows from "Goods" for USD1,060 million.

The foreign exchange financial account of the "Non-Financial Private Sector" had a deficit of USD534 million in December, resulting basically from net payments of financial debt for USD545 million.

The transactions carried out under the foreign exchange financial account of the "Financial Sector" resulted in a surplus of USD144 million, mainly explained by the decrease of USD228 million in liquid foreign assets of financial institutions' General Exchange Position.

In December, the transactions carried out under the foreign exchange financial account of the "General Government and the BCRA" ran up a deficit of USD1,399 million, mainly explained by the repayment of principal of debts to the IMF at maturity (USD1,853 million).

During December, BCRA's international reserves fell USD1,867 million, totaling USD39,663 million by the end of the month.

I. Introduction

This report analyzes information on foreign exchange transactions made in December 2021 as gathered by the Exchange Transaction Reporting System administered by the BCRA. Additionally, it relies on information on changes in BCRA's International Reserves due to transactions carried out by the BCRA on its own account or on behalf of the National Government, and on changes in the balance of institutions' foreign currency accounts at the BCRA.¹

Data collected from institutions include information on every transaction conducted in the forex market by natural or legal persons (including the sector to which they belong, which agrees with the main business activity reported to AFIP (Federal Administration of Public Revenues)), amounts traded, currency denomination, and the reason for the foreign exchange transaction (heading)—such as inflows or outflows from exports or imports of goods or services, saving, and financial liabilities, as defined in the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

For further information on methodological aspects of this report, please read the methodology used for compiling foreign exchange market and foreign exchange balance statistics, which is available [here on BCRA's website](#).

Should you need detailed information about the exchange rate regulations in force and the changes that have been implemented since November 2017, please see the [Consolidated Text on Foreign Trade and Exchange Regulations](#) available on BCRA's website.

Section II of this report analyzes the result of foreign exchange transactions for December; data are broken down by sector and by heading.²

Section III deals with the Foreign Exchange Balance which comprises transactions carried out by the institutions with their clients in the foreign exchange market and those carried out by the BCRA—either on its own account or on behalf of the National Government. It is worth noting that the Foreign Exchange Balance is presented in an analytical format based on the Balance of Payments broken down by component and by institutional sector. This information is published anew in 2020, allowing readers to follow-up data (which has taken again the form of an affidavit) by type of transaction. However, **the evolution of the historical series shown here should be analyzed in light of the different forex regulations in**

¹ Communication "A" 3840, as amended.

² Sectors were grouped into: "Central Bank", "Institutions", "General Government", "Oilseeds and Grains", "Real Sector excluding Oilseeds and Grains", "Natural Persons", and "Institutional Investors and Others".

For identification purposes, each sector is defined as follows: "**General Government**" stands for the so-called "Public Sector" and embraces transactions made by the National Treasury directly through its account in foreign currency held with the BCRA; "**Oilseeds and Grains**"; "**Real Sector excluding Oilseeds and Grains**" includes the following sectors: "Oil", "Food, Beverages and Tobacco", "Textile and Leather Industries", "Paper, Publishing and Printing Industry", "Chemical, Rubber and Plastic Industries", "Non-Metallic Mineral Products (Cement, Ceramics and Others)", "Common Metals and their Manufacture", "Machinery and Equipment", "Automobile Industry", "Other Manufacturing Industries", "Electricity (Generation, Transport, Distribution)", "Gas (Extraction, Transport, Distribution)", "Water", "Commerce", "Transport", "Communications", "Mining", "Agriculture and Other Primary Activities", "Construction", "Information Technology", "Gastronomy", "Entertainment" and "Tourism and Accommodation Services"; "**Financial and Foreign Exchange Institutions**" includes the sector's transactions; "**Natural Persons**" includes all natural persons within the sector "Other Non-Financial Private Sectors"; and "**Institutional Investors and Others**" includes "Insurance" as well as the rest of the "Other Non-Financial Private Sectors".

force by period (see Section B.5. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#)).³

Section IV deals with the stock of international reserves by the end of the period and their evolution.

Finally, Section V deals with information on the amount traded in the foreign exchange market. This amount stands for transactions made by institutions with their clients—both gross purchases and gross sales—, transactions between institutions, and those carried out among institutions and the BCRA.

II. Result by Sector in the Foreign Exchange Market

The world and domestic economies are struggling to gradually recover from the health and economic effects of a profound crisis caused by the COVID-19 pandemic, with consequences on trade and capital flows at global and local levels. In this context, financial institutions' clients purchased USD247 million in the forex market. The BCRA sold USD72 million and made net payments through the local currency payment system (SML) for USD85 million. In turn, financial institutions sold USD90 million (see Table II.1).⁴

The following table is intended to analyze the purchases and sales carried out through institutions in the forex market. For readers' convenience, each sector's net foreign exchange result analyzed in this report is

³ The Central Bank's website (www.bcra.gob.ar) contains different statistical series of the Foreign Exchange Market (to access statistical series, [click here](#)), together with an annex broken down by sector and main headings (to access the statistical Annex of the foreign exchange balance [click here](#)). In addition, the "Main differences between the balance of payments and the foreign exchange balance" are available [here](#). The results in this section are broken down by the main sectors trading in the forex market in order to set net purchasers apart from net sellers.

⁴ Information on the local currency payment system (SML) of this report has been drawn from the Exchange Transaction Reporting System (RIOC) and reported by transaction date. For more information, see the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#)

⁵ Transactions in the forex market are reported according to their transaction date, except for the purchase and sale of securities payable in foreign currency.

⁶ The result by sector excludes purchases of foreign currency to pay card bills for expenses incurred abroad for an amount of USD206 million. These payments of local debts in foreign currency do not imply a net demand in the whole system, made up by the institutions and the BCRA.

arranged in horizontal reading direction, and each heading's net result—as informed by the institutions to the BCRA—is displayed vertically. The result of forex transactions in pesos and in foreign currency may be set apart from the result of self-to-self international transfers (transfers of foreign currency to accounts abroad in December). (See Table II.2).⁸

Source: BCRA

Based on the chart above, the following sectors' performance can be highlighted (for more information on the sector-based categorization used, see Section B.4. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#)).

"Oilseeds and Grains" was the main net seller of foreign currency in the market over December. This sector recorded net inflows for USD2,572 million mainly for the concepts included in "Goods" (collections on exports net of payments for imports), which is reasonable enough as it proves to be the main exporting sector in the economy. In a context of high international agricultural product prices, the sector's net result from transfers for goods on the forex market amounted to USD2,612 million, up 49% y.o.y.

The "Real Sector excluding Oilseeds and Grains", on the other hand, was a net purchaser of foreign currency, with a total of USD2,261 million. These purchases were mainly used to make payments for imports of goods and services, and to pay financial debt (for further information, see Sections III.1.1 and III.1.2).

"Natural Persons" made net purchases totaling USD421 million mainly for payments on cards to non-resident suppliers (USD201 million, showing an increase of 20% against November), and for saving

⁸ Although self-to-self international transfers are not precisely forex transactions, they are recorded in forex statistics. They involve a transfer of foreign currency from abroad to a local account opened in foreign currency and/or a debit of funds deposited locally for their transfer abroad. Inflows are recorded under the transfer heading (positive sign). In addition, there is a second record where the same amount is entered under a negative sign for the crediting of funds. Contrariwise, a payment abroad from a local account in foreign currency is recorded under the payment heading with a negative sign, and the debit from the account, under a positive sign. Consequently, the total result of self-to-self international transfers in the forex market is neutral. For more information, see Section C.4.6. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#)

purposes (USD169 million, recording an amount similar to that of November). Furthermore, they transferred USD11 million from their own accounts abroad, credited in local accounts in foreign currency ("Self-to-Self International Transfers"); having a neutral impact on the forex market.

"Institutional Investors and Others" recorded net purchases for USD154 million.

The "General Government" (National Treasury excluded) made net sales in the forex market through licensed financial institutions for USD119 million, mainly explained by net sales of foreign assets for USD237 million, which were partially offset by payments for Goods and Services (USD95 million) and other current services (USD65 million).

Finally, financial institutions made net purchases with their own funds for USD103 million mainly to pay financial debt.

III. Foreign Exchange Balance

The Foreign Exchange Balance comprises transactions carried out by institutions with their clients in the foreign exchange market (included in Section II) and those carried out by the BCRA—either on its own account or on behalf of the National Government. It is worth noting that the Foreign Exchange Balance is presented in an analytical format based on the Balance of Payments broken down by component and by institutional sector.

III.1 Current Account

Current account transactions recorded in the foreign exchange balance showed a deficit of USD44 million in December (see Table III.1.1).⁹

⁹ For more information on the changes in the regulations that have an impact on the comparison of flows under "Goods", among other items, see Section B.5. Important Regulatory Provisions that Have an Impact on Foreign Exchange Statistics of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#) available at BCRA's website.

III.1.1 Goods

In December, transfers for "Goods" on the foreign exchange balance exhibited net inflows for USD1,060 million, resulting from collections on exports for USD6,741 million and payments of imports for USD5,681 million (see Chart III.1.1.1).

**Chart III.1.1.1 Foreign Exchange Balance
Transfers for Goods**

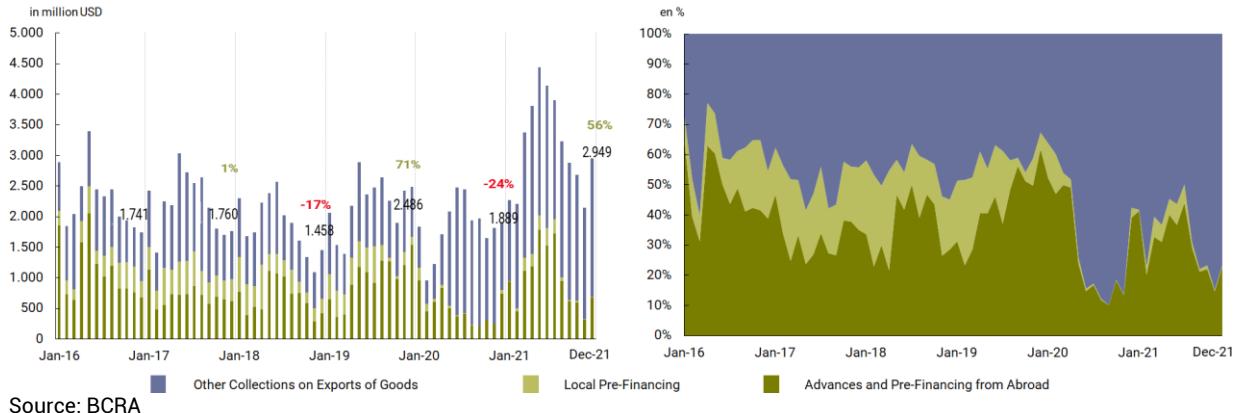

Source: BCRA

The "Oilseeds and Grains" sector recorded foreign currency sales for collections on exports of goods through the forex market for USD2,949 million, up 56% y.o.y., and 38% against November. Twenty three percent of inflows were collected in advance through advances or pre-financing (local and foreign); this share is close to the minimum of the series observed (see Chart III.1.1.2). The sector's FOB exports reached USD2,746 million, a volume below inflows from the collection on exports of goods through the forex market. This implies an increase of the sector's commercial debts resulting from advances and the pre-financing of exports or a reduction of their assets abroad.

In turn, Affidavits of Sales Abroad (Declaraciones Juradas de Ventas al Exterior, DJVEs) as reported by the Ministry of Agriculture and Fisheries (which determine withholding payments on exports) recorded an increase of 91% against November, and of 295% y.o.y.

**Chart III.1.1.2 Foreign Exchange Balance
Collection on Exports of Goods from the "Oilseeds and Grains" sector**

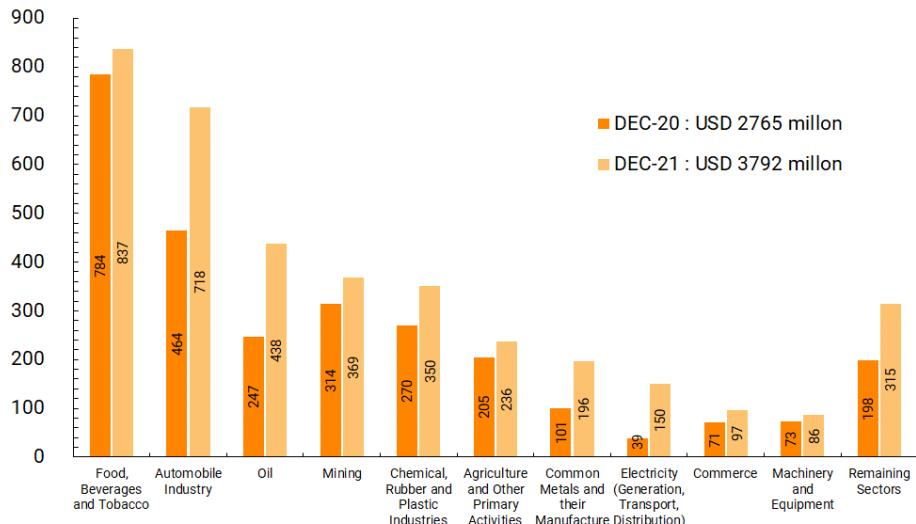

Source: BCRA

In December, the amount of wheat and corn grains traded in the local market was similar to that recorded for the previous 2018/19 and 2019/20 harvest seasons, following the same trend of November. The 21/22 harvest season continued at a good pace for wheat and at an average rate for corn. In contrast, soybean levels were below those observed in previous harvest seasons.

In turn, inflows from the collections on exports of goods from the remaining sectors totaled USD3,792 million, an amount 37% higher than that of December 2020; furthermore, the dynamics of the Automobile Industry, and that of the Oil, Electricity, and Metallurgical sectors should be underscored. Moreover, 72% of these inflows were concentrated in the "Food, Beverages and Tobacco", "Automobile Industry", "Oil", "Mining", and "Chemical, Rubber and Plastic Industries" sectors (see Chart III.1.1.3).

**Chart III.1.1.3 Foreign Exchange Balance
Collection on Exports of Goods ("Oilseeds and Grains" Sector Excluded)**

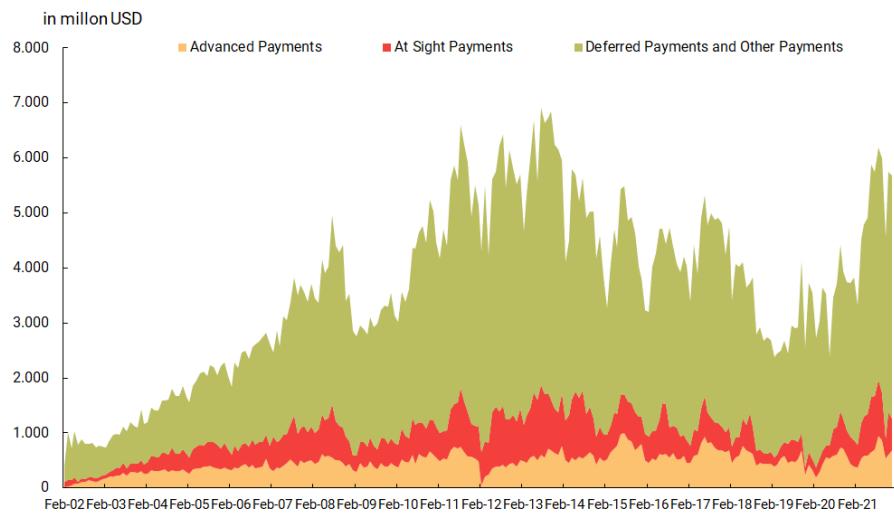

Source: BCRA

In December, payments of imports of goods through the forex market totaled USD5,681 million, up 52% y.o.y. against payments made in December 2020. This figure was slightly below December's FOB imports, which amounted to USD5,768 million.

As regards imports of goods, 78% of payments were deferred, 12% were advance payments, and the other 10% were sight payments in December (see Chart III.1.1.4).

**Chart III.1.1.4 Foreign Exchange Balance
Evolution of Payments for Imports of Goods by Type of Payment**

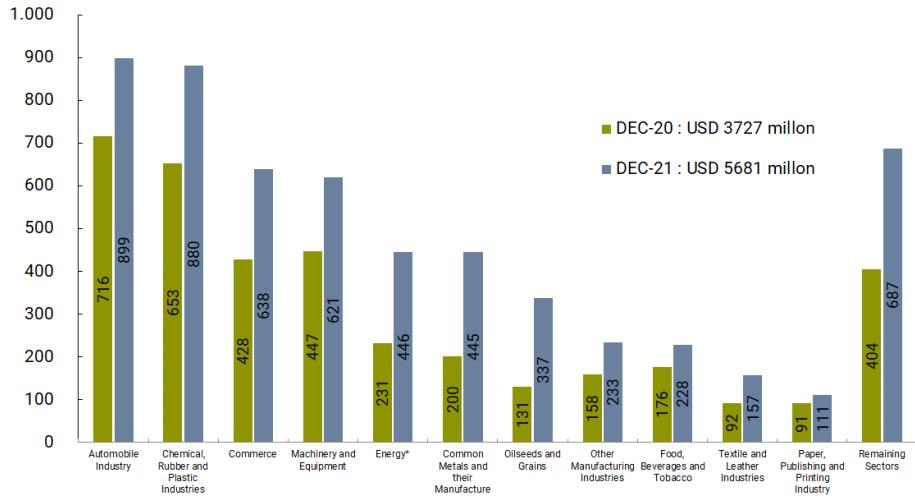

Source: BCRA

In terms of sectors, 61% of December's payments for imports of goods were made in the "Automobile Industry", "Chemical, Rubber and Plastic Industries", "Commerce", "Machinery and Equipment", and "Energy" sectors (see Chart III.1.1.5).¹⁰

¹⁰ The "Energy" sector includes companies belonging to the "Oil", "Electricity" and "Gas" sectors.

Chart III.1.1.5 Foreign Exchange Balance Payments for Imports of Goods by Sector

*Note: It includes Oil, Electricity and Gas Sectors

Source: BCRA

III.1.2 Services, Primary and Secondary Income

The "Services" account recorded a deficit of USD714 million in December, with a 5% drop in net outflows against November. It is mainly explained by net outflows from "Freight and Insurance" and "Travel and Passenger Transport, and Other Expenses Paid with Cards" which amounted to USD440 million and USD367 million, respectively. These transactions were partially offset by net inflows from "Business, Professional and Technical Services" for USD172 million (see Chart III.1.2.1).¹¹

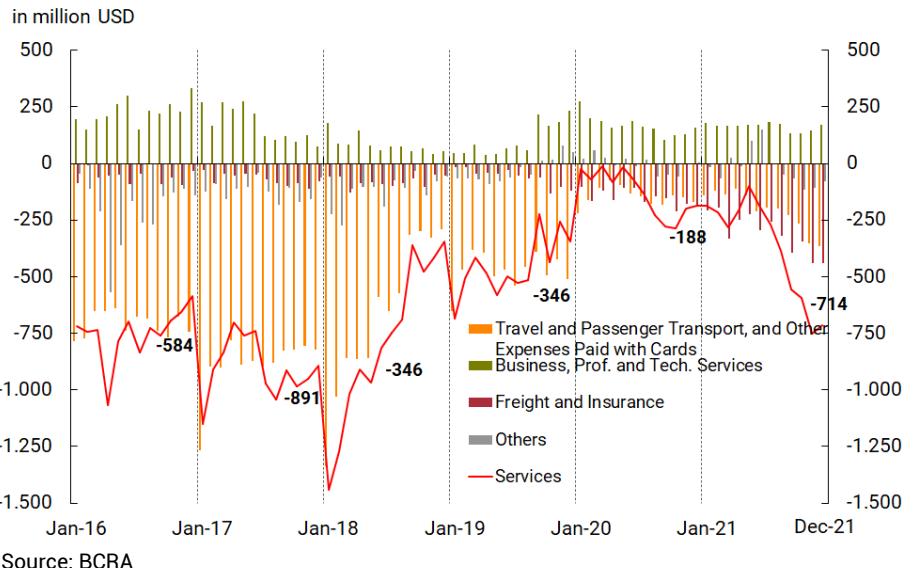

Given the lower dynamics of outbound tourism under the COVID-19 pandemic, the net deficit of the "Travel and Passenger Transport, and Other Expenses Paid with Cards" account remains below the levels historically observed up to early 2020. This behavior is in line with the information published in the last international tourism survey. It is worth pointing out that the transfers made to international credit card issuers include purchases made either during travels abroad or those made on a remote basis. In turn, inflows also include non-resident remote purchases made with cards to Argentine suppliers.^{12 13}

¹¹ It includes freight, insurance and insured events, and other transport services.

¹² To access the latest technical report on International Tourism Statistics, [click here](#).

¹³ For more information on the changes implemented to the regulations that have an impact on the comparison of the flows reported in the items included under "Services", among others, see Section B.5. Important Regulatory Provisions that Have an Impact on Foreign Exchange Statistics of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#) available at BCRA's website.

**Chart III.1.2.1 Foreign Exchange Balance
Net Inflows from Services**

Source: BCRA

Primary income transactions recorded net outflows amounting to USD383 million in December, mainly due to net payments of "Interest" for USD305 million, and to transfers of "Profits and Dividends" abroad for USD63 million. This situation was observed in the context of relaxation of terms of access to the forex market implemented in June 2021 for exporters. As regards gross payments of interest, USD72 million were made by the "General Government and the BCRA", and USD237 million by the private sector.¹⁴

Finally, secondary income transactions recorded net outflows for USD7 million.

III.2 Capital Account

In December, the capital account of the foreign exchange balance recorded net inflows for USD9 million.

III.3 Foreign Exchange Financial Account

In December, net outflows for the foreign exchange financial account totaled USD1,955 million. This result was explained by a deficit in the "General Government and the BCRA" (USD1,399 million), in the "Non-Financial Private Sector" (USD534 million), and in "Other Net Transfers" (USD166 million), which were partly offset by the surplus recorded in the "Financial Sector" (USD144 million) (see Table III.3.1.).¹⁵

¹⁴ The regulations on the access to the forex market for the payment of profits and dividends set out that the companies that have exchanged foreign currency from new direct investment contributions in the forex market since January 2020 can make payments of up to 30% of the accumulated amount so exchanged since that date. In turn, non-resident shareholders will be able to access the forex market for the payment of profits and dividends on foreign direct investment contributions entered and exchanged in the forex market since November 16, 2020, and allocated to finance projects under the "Plan for the Promotion of the Argentine Natural Gas Production". Effective June 2021, exporters of industrialized and extractive goods that registered an increase in their external sales over 2020, will be able to access the exchange market for the payment of profits and dividends from closed and audited balance sheets, for a percentage of that increase. See Communications "A" 6869, "A" 7168 and "A" 7301.

¹⁵ For more information on the "Other Net Transfers" account of the foreign exchange balance, see Section C.4.11. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#)

III.3.1. Foreign Exchange Financial Account of the Non-Financial Private Sector

The financial account of the “Non-Financial Private Sector” had a deficit of USD534 million in December, resulting basically from net payments of financial debt for USD545 million (see Table III.3.1.1).

Table III.3.1.1. Foreign Exchange Balance**Foreign Exchange Financial Account of the Non-Financial Private Sector**

Source: BCRA

The buildup of foreign assets by non-financial private sector residents brought about net outflows amounting to USD78 million: USD120 million in net purchases of foreign currency and USD42 million in net transfers from abroad (mainly credited to local accounts in foreign currency, “Self-to-Self International Transfers”, with a neutral result in the forex market).

This outcome reflects net purchases for USD169 million made by “Natural Persons”, partially offset by net sales for USD49 million made by legal persons and others (see Chart III.3.1.1).

**Chart III.3.1.1 Foreign Exchange Balance
Net Purchases of Banknotes by Sector**

in million USD

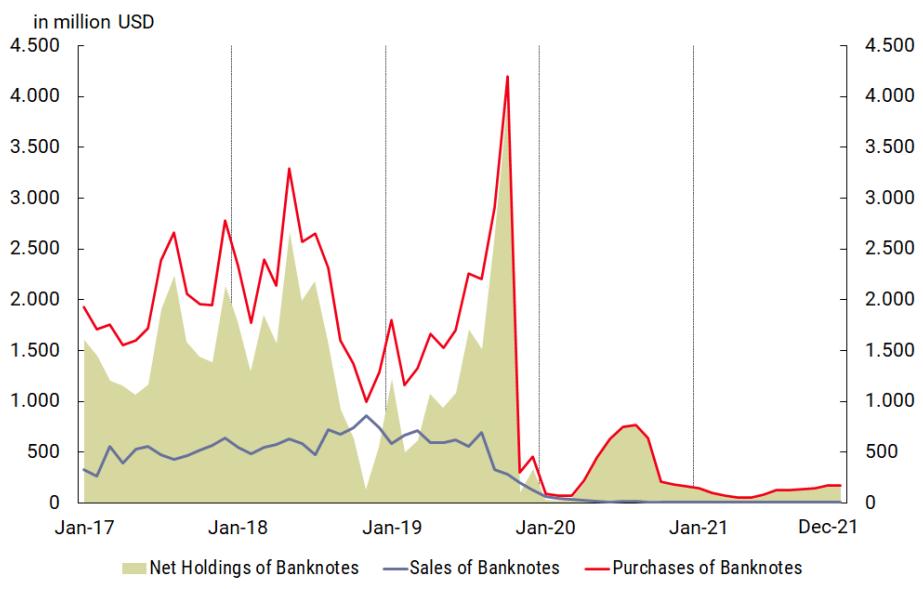

Source: BCRA

"Natural Persons" purchased banknotes for USD174 million and sold USD5 million, a similar figure to that of November (see Chart III.3.1.2). These transactions were made in the context of the regulatory changes introduced in mid-September 2020, as under Communication "A" 7105 (introducing controls and monitoring mechanisms for ensuring that clients' financial and income capacity make them eligible to open savings accounts in foreign currency; as well as limits to co-owners' access to purchase foreign currency for building up foreign assets), and Communication "A" 7106 (establishing that any payments made in foreign currency on credit or debit cards will count as part of the USD200 monthly quota per person, and that beneficiaries under paragraph 4 of Communication "A" 6949, as supplemented, and/or Section 2 of Decree No. 319/20 may not access the forex market until benefits are over).¹⁶

¹⁶ As from September 16, 2020, the Federal Administration of Public Revenues (AFIP) will collect a 35% contribution in advance of income and personal property taxes from natural persons applying for foreign currency to build up foreign assets, or pay their debit and/or credit card bills (General Resolution 4815/2020).

In terms of traders, 907,000 individuals purchased banknotes (19,000 less than in November), while sellers amounted to about 25,000—with per capita purchases and sales for USD192 and USD205, respectively (see Chart III.3.1.3).

In turn, as it has already been mentioned, in December, this sector made net transfers from their own accounts abroad (USD42 million) to the “Real Sector” (USD19 million), to “Institutional Investors” (USD11 million), and to “Natural Persons” (USD11 million). In the case of “Natural Persons” they were

credited in local accounts in foreign currency ("Self-to-Self International Transfers"), having a neutral impact on foreign exchange transactions.¹⁷

Net payments of financial debts from the non-financial private sector, including loans from international agencies, totaled USD339 million in December, out of which USD138 million stood for net payments to local institutions, and USD202 million for the payment of other financial debt in foreign currency (see Chart III.3.1.4).¹⁸¹⁹

**Chart III.3.1.4 Foreign Exchange Balance
Non-Financial Private Sector. Financial Debt**

Source: BCRA

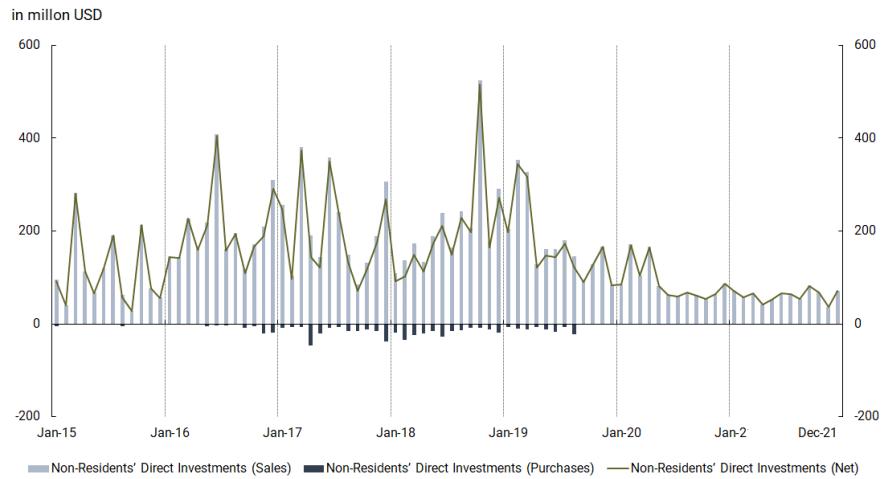

Direct investments made by non-residents recorded net inflows for USD71 million in December. The "Oil" sector recorded the highest number of sales as a result of direct investment inflows, totaling USD30 million (see Chart III.3.1.5).

¹⁷ Prior to October 2019, a part of the funds transferred by the "Real Sector" to accounts abroad was used to pay their foreign liabilities through such accounts, whether commercial or financial, such as payments for imports of goods and services, primary income, debt securities or loans. Based on the regulatory changes introduced by Communication "A" 6770, purchases by legal persons to make transfers to their own accounts abroad now require the prior authorization of the BCRA.

¹⁸ Net payments exclude purchases of foreign currency to pay card bills for expenses incurred abroad for an amount of USD206 million. These payments of local debts in foreign currency do not imply a net demand in the whole system, made up by the institutions and the BCRA. Instead, they were calculated under the heading "Travel, and Other Expenses Paid with Cards" at the time of the transfer abroad.

¹⁹ As from September 16, 2020, through Communication "A" 7106, the sovereign debt restructuring process in foreign currency was successfully carried out by the National State. In symphony with this measure, the BCRA set out guidelines for private sector companies to refinance their foreign financial debts or local debt securities in foreign currency, so that they may be aligned to the new requirements, thus ensuring the smooth functioning of the forex market.

Finally, due to the regulatory changes implemented that limited the transactions carried out by institutions with their own funds, foreign currency flows from transactions carried out with securities in the secondary market posted no movements.²⁰

III.3.2. Foreign Exchange Financial Account of the Financial Sector

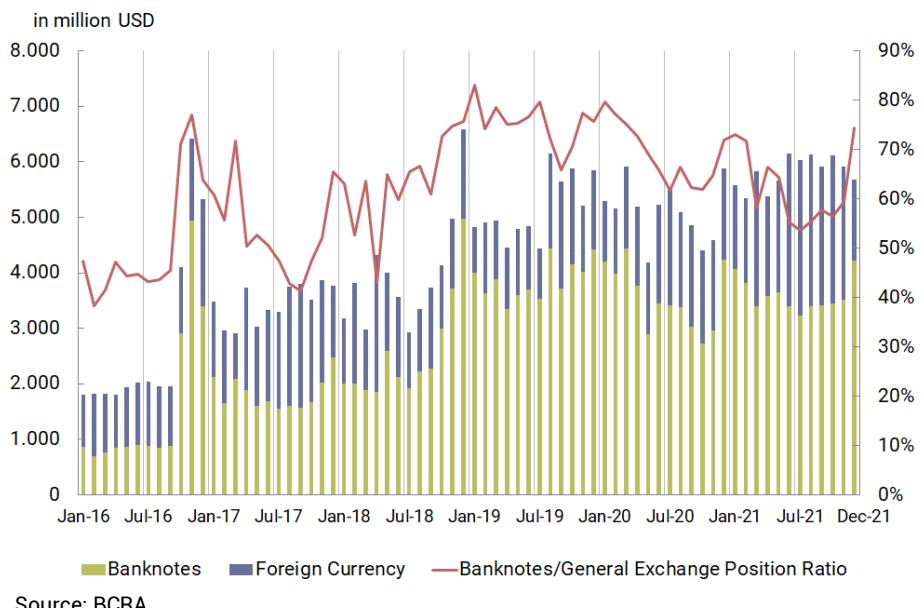

In December, the transactions carried out under the foreign exchange financial account of the "Financial Sector" resulted in a surplus of USD144 million. This outcome is mainly explained by a decrease in liquid foreign assets of financial institutions' General Exchange Position.²¹

Financial institutions' General Exchange Position amounted to USD5,685 million at the end of December, down USD228 million against November. This may be mostly explained by a drop in the stock of foreign currency amounting to USD940 million, partially offset by a rise in the stock of banknotes for USD712 million, typical year-end seasonal high performance of private sector deposits due to tax reasons. Holdings of foreign currency banknotes totaled USD4,223 million by the end of the month. This stock accounted for 74% of the total General Exchange Position, and it is allocated by institutions to cover local foreign currency deposit transactions and foreign exchange market needs (see Chart III.3.2.1).

²⁰ In the forex market, transactions are entered on behalf of financial institutions. The net effect of these transactions has, as counterpart, other residents or non-residents. Therefore, they are included in the foreign exchange financial account of the non-financial private sector. For more information, see Section C.4.9. "Purchase and Sale of Securities" of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#).

²¹ The General Exchange Position is defined in Section C.4.7. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#).

On another note, the ensemble of financial institutions ended December with a forward short position in foreign currency of USD2 million, reversing their long position in about USD271 million against the end of November. They sold USD496 million in regulated markets and purchased USD225 million from their clients directly (Forwards) over the month (see Chart III.3.2.2).

Foreign-capital institutions' net sales amounted to USD270 million ending December with a net long position of USD71 million. In turn, national-capital institutions sold USD2 million, ending December with a net short position of USD73 million (see Chart III.3.2.3).

The volume traded in forward markets totaled USD11,003 million in December, i.e.: USD550 million daily on average. Transactions carried out in the Mercado a Término de Rosario (ROFEX) continued to stand out, with an 80% share in the total volume traded in the forward market (see Chart III.3.2.4).²²

III.3.3. The Foreign Exchange Financial Account of the General Government and the BCRA

In December, the transactions carried out under the foreign exchange financial account of the “General Government and the BCRA” ran up a deficit of USD1,399 million (see Chart III.3.3.1), mainly explained by the net outflows channeled to repay the principal of debts to the IMF at maturity (USD1,853 million), which were partially offset by inflows from loans from International Organizations and other bilateral organizations.

²² The chart includes the total volume traded in the ROFEX, the transactions arranged by institutions in the Electronic Securities and Foreign Currency Trading Market (MAE), and with Forwards. This information comes from the Forward Transactions Reporting Scheme (Communication “A” 4196, as amended) and postings on the websites of MAE and ROFEX.

IV. BCRA's International Reserves

During December, BCRA's international reserves fell USD1,867 million, totaling USD39,663 million by the end of the month (see Chart IV.1). This drop was mainly explained by the repayment of principal of debts to the IMF at maturity totaling USD1,853 million.

V. Volumes Traded in the Foreign Exchange Market

In December, the volume traded in the forex market totaled USD21,703 million, up 53% against December 2020. The average daily volume traded was USD1,085 million (see Chart V.1). The y.o.y. increase in the volume was explained by a 45% increase in transactions carried out between licensed institutions and their clients, and by a rise of 75% in transactions carried out between financial and foreign exchange institutions.²³

Chart V.1 Foreign Exchange Market Volume Traded Daily Evolution

in million USD

Source: BCRA

Foreign exchange transactions between institutions and their clients accounted for 75% of the total volume traded, while transactions between institutions—mainly through the Electronic Trading System (SIOPEL)—represented 17%; in turn, transactions between institutions and the BCRA stood for the remaining 8% (see Chart V.2).²⁴

Given that we are still in the midst of the pandemic, coupled with the measures ordered by the National Government to mitigate the spread of COVID-19, and the fact that foreign exchange market transactions were mostly made online, in December, there were only 109 trading institutions (109 against more than 245 as was usually the case before the pandemic), and 34 different currencies were used (34 against 45 as was usually the case before the pandemic).

²³ In BCRA's website there is a quarterly ranking of volumes traded with clients in the forex market broken down by institution (to access the ranking, [click here](#)).

²⁴ The volume traded between licensed institutions and their clients excludes the following items: the underwriting of LEBAC bills, self-to-self international transfers (around USD970 million in December 2021), the record of deposits in foreign currency allocated for the payment of financial debt service for about USD111 million, and purchases of foreign currency to pay card bills for expenses incurred abroad (around USD206 million for the month under study).

Thus, most of the volume traded between licensed institutions and their clients was highly concentrated in a few number of institutions (out of the already mentioned 109 institutions, the first ten accounted for 89% of such volume) and in the currency used; USD-denominated transactions had a 94% share in the total traded with clients, followed by Euros, which accounted for 5% of the total (see Chart V.3).

Finally, 91% of foreign exchange transactions between financial and foreign exchange institutions were channeled through private financial institutions. Public banks accounted for the remaining 9% of transactions, foreign exchange houses and agencies having a marginal share—less than 0.1%.
