Executive Summary

In July, the BCRA made purchases in the [foreign exchange market](#) amounting to USD2,163 million. In turn, institutions' clients sold USD1,166 million in the forex market, while financial institutions' sales amounted to USD783 million, and the National Treasury sold USD146 million. The BCRA also made net payments through the Local Currency Payment System for USD68 million.

The "Non-Financial Private Sector" was a net seller of foreign currency in the foreign exchange market (USD502 million). Within this group, the "Oilseeds and Grains" sector was the main supplier with net sales of USD3,505 million, mainly explained by the result in "Goods."

"Natural Persons" made net purchases of foreign currency for a total of USD4,124 million, mainly explained by purchases of foreign currency banknotes (USD2,916 million), outflows from services and other primary and secondary income (USD786 million) and foreign currency transfers for unspecified purposes (USD546 million). Out of the net purchases of banknotes and foreign currency for unspecified purposes, approximately USD1,000 million remained deposited in local banks and USD1,000 million increased the foreign assets' position, whereas about USD900 million were transferred to financial institutions to pay card expenses recorded under "Services and Other Primary and Secondary Income."

In terms of the [foreign exchange balance](#) for July, the foreign exchange current account recorded a surplus of USD413 million. This result was explained by the net inflows recorded in "Goods" (USD4,077 million) and "Secondary Income" (USD8 million), which were partially offset by the net outflows recorded in "Primary Income" (USD2,772 million) and "Services" (USD900 million). In turn, the foreign exchange financial account recorded a surplus of USD2,191 million. This result was attributed to the net inflows recorded in the "General Government and the BCRA" (USD2,356 million), the "Financial Sector" (USD1,052 million) and "Other Net Transfers" (USD1,049 million). These records were partially offset by net outflows from the "Non-Financial Private Sector" (USD2,266 million).

During July, [BCRA's international reserves](#) increased USD2,729 million, totaling USD47,599 million by the end of the month. The change was mainly explained by net inflows of principal and interest from international organizations (USD2,621 million, mainly arising from secured loans granted by multilateral organizations to the National Treasury), BCRA's purchases of foreign currency in the foreign exchange market (USD2,163 million), inflows from new issuances of Argentine government securities in the local market (USD1,063 million), the increase in institutions' holdings of foreign currency at the BCRA (USD1,307 million), and the increase in the US dollar exchange rate of foreign exchange reserves (USD110 million). These transactions were partially offset by payments of principal and interest on sovereign bonds (USD4,476 million), the sale of foreign currency in the forex market by the National Treasury (USD146 million), and net payments made by the BCRA through the Local Currency Payment System (USD67 million).

I. Result by Sector in the Foreign Exchange Market

In July, the BCRA made purchases in the foreign exchange market amounting to USD2,163 million. In turn, institutions' clients sold USD1,166 million in the forex market, while financial institutions' sales amounted to USD783 million, and the National Treasury sold USD146 million. The BCRA also made net payments through the Local Currency Payment System for USD68 million.

II. Foreign Exchange Balance

II.1. Foreign Exchange Current Account

Current account transactions recorded in the foreign exchange balance had a surplus of USD413 million in July. This result was explained by net inflows recorded in “Goods” (USD4,077 million) and “Secondary Income” (USD8 million), which were partially offset by the net outflows recorded in “Primary Income” (USD2,772 million) and “Services” (USD900 million) (see Table II.1).¹

II.1.1. Goods

In July, transfers for “Goods” in the foreign exchange balance exhibited net inflows for USD4,077 million. This result was explained by collections on exports totaling USD10,074 million, a new historic high for the third month in a row (when excluding months with specific export increase programs). These records were partially offset by payments for imports amounting to USD5,997 million (see Chart II.1.1).

¹ The current account of the foreign exchange balance differs from that reported in the balance of payments prepared by INDEC. To understand the definitions and the differences between the current account of the foreign exchange balance and that of the balance of payments, refer to the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#). Specifically, sections C.1, C.1.1, C.1.2 and C.1.3.

**Chart II.1.1 Foreign Exchange Balance
Transfers for Goods**

Source: BCRA

II.1.1.1 Collections on Exports of Goods

In this context, in July, the “Oilseeds and Grains” sector recorded foreign currency sales for collections on exports of goods through the forex market for USD3,966 million. On the other hand, FOB exports totaled USD3,300 million in the same period, which means that the sector's stock of commercial debt resulting from advances and the pre-financing of exports (local and foreign) would have increased (or, alternatively, their assets resulting from loans and commercial advances granted to non-residents for exports of goods would have decreased).²

Inflows from the collections on exports of goods from the remaining sectors settled through the forex market totaled USD6,108 million in July. At the same time, FOB exports of goods amounted to USD5,515 million during the month, which would have led to an increase in stock of debt resulting from advances and the pre-financing of exports of goods (or, alternatively, their assets resulting from loans and commercial advances granted to non-residents for exports of goods would have decreased).

² The difference between the evolution of exports of FOB goods and the corresponding collections of exports through the foreign exchange market serves as a proxy variable for estimating the change in exporters' commercial debt (or that of their uncollected foreign assets). However, it is important to emphasize that these conclusions are based on preliminary data. The external debt arising from advances and pre-financing in the exporting sector is subsequently estimated by the BCRA and published in its quarterly external debt statistics report ([Private Sector External Debt Standardized Statistics | BCRA](#)).

In July, in terms of collections on exports of goods in the forex market, the year-on-year increases in the “Mining”, “Chemical, Rubber and Plastic Industries” and “Automobile Industry” sectors stood out³ (see Chart II.1.1.1).

Chart II.1.1.1 Foreign Exchange Balance
Collection on Exports of Goods (“Oilseeds and Grains” Sector Excluded)

Source: BCRA

II.1.1.2 Payments for Imports of Goods

In July, payments for imports of goods through the forex market reached USD5,997 million, down 7% against June, and down 5% y.o.y. In turn, FOB imports amounted to USD6,366 million in July. In addition, importers can settle their imports and commercial debts through stock exchange transactions involving the purchase of foreign currency, and also with BOPREAL bonds. Therefore, all these payment mechanisms should be considered to better estimate the changes in commercial debt. These alternative mechanisms were used by importers to settle about USD250 million to pay obligations related to imports in July. Taking into account all the aforementioned payment mechanisms, the importing sector’s debt levels would have increased during July (see Chart II.1.1.2.1).

³ See the section on [Relevant Regulations](#) for more information on the registration of foreign exchange transactions and, specifically, the regulations on collections on exports, import payments and the impossibility of conducting an accurate year-on-year comparison of related statistics.

Chart II.1.1.2.1 Foreign Exchange Balance
Ratio of Payments for Imports of Goods to FOB Imports

Source: BCRA, INDEC and CNV

In July, the “Energy” sector recorded net inflows for goods of USD513 million, up 17% compared to July 2025. This increase is explained by a year-on-year rise of 12% in collections on exports of goods in the forex market, partially offset by a 9% increase in payments for imports (see Chart II.1.1.2.2).

Chart II.1.1.2.2 Foreign Exchange Balance
Energy – Transfers for Goods

Source: BCRA

On the other hand, “Oilseeds and Grains” also posted a year-on-year increase in payments for imports, while the other key sectors recorded year-on-year declines (see Chart II.1.1.2.3).

**Chart II.1.1.2.3 Foreign Exchange Balance
Payments for Imports of Goods by Sector**

II.1.2. Services, Primary and Secondary Income

The “Services” account recorded a deficit of USD900 million in July.⁴ This represented a deficit 3% lower in year-on-year terms, associated with a 24% y.o.y. increase in collections for exports of services, and about an 11% y.o.y. increase in payments for imports of services.

It is estimated that the travel and passenger transport account through the foreign exchange market recorded net outflows amounting to USD710 million, explained by gross outflows of about USD1,048 million and gross inflows of USD338 million.^{5 6}

⁴ See the section on [Relevant Regulations](#) for more information on the registration of foreign exchange transactions and, specifically, the regulations on the “Services” account and the impossibility of conducting an accurate year-on-year comparison of related statistics.

⁵ Gross outflows associated with card expenses for travel related purchases are estimated at USD809 million (this figure excludes digital services amounting to USD206 million and card payments for goods delivered via postal services amounting to approximately USD108 million). In addition, tour operators recorded transfers abroad amounting to USD109 million and passenger transport services accounted for USD130 million. Likewise, gross inflow estimates consist of travel-related card collections totaling USD260 million (excluding digital services and about USD5 million inflows from exports of goods delivered via postal services), transfers abroad made by tour operators and non-resident’s banknotes accounting for USD35 million, and inflows from passenger transport services totaling USD43 million.

⁶ Under Communication [A 8254](#), published in June 2025 by the BCRA, the concept code used by institutions to record card consumptions—either by residents with non-resident suppliers or by non-residents with Argentine suppliers—was changed. This communication, effective since July 2025, makes a distinction between expenditures related to international travel and online purchases of goods by residents from foreign suppliers and those related to digital service consumption by residents from foreign suppliers. As a result, digital service consumption is grouped under the “Other Services” account. This change is intended to improve the statistics reported since the transfers made to international credit card issuers involve both purchases made while traveling abroad and online purchases of goods and services from foreign suppliers. Similarly, the travel and passenger transport account excludes estimates of payments and collections for goods purchased and delivered via postal services. The sheet labeled “Cards and Travel Annex” in the statistical annex of this report ([click here to download](#)) includes an estimate of gross inflows and outflows for Travel and Passenger Transport, net of payments for digital service purchases, as well as an estimate of payments/collections for goods purchased and

It should be noted that 70% of all outflows for travel-related goods and services expenses, other expenses paid with cards and passenger transport services are directly covered by clients with funds in foreign currency, mainly purchases of banknotes for unspecified purposes through the foreign exchange market.

The remainder of the “Services” account was explained by the net outflows from “Other Services” (USD387 million), “Freight and Insurance” (USD169 million), and goods delivered via postal services (USD103 million). These net outflows were partially offset by net inflows from “Business, Professional and Technical Services” (USD469 million).

Primary income transactions resulted in net outflows amounting to USD2,772 million in July, due to net outflows of interest for USD2,309 million, out of which the “General Government and the BCRA” paid USD1,883 million, and profits, dividends and other income amounting to USD463 million.⁷

Outflows on account of profits and dividends in July amounted to USD451 million, mainly channeled through purchases in the foreign exchange market (see Chart II.1.2.1). Out of the total gross outflows recorded under this heading, the “Energy” (USD149 million), “Financial Institutions” (USD119 million), and “Chemical, Rubber and Plastic Industries” (USD91 million) sectors stood out.

**Chart II.1.2.1 Foreign Exchange Balance
Outflows of Profits and Dividends**

Source: BCRA

Finally, secondary income transactions recorded a surplus of USD8 million.

delivered via postal services (figures based on the CIF import/export values reported by the Argentine trade statistics published by INDEC). For more information on the changes implemented to the regulations that have an impact on the comparison of the flows reported in the headings included under “Services,” among others, see section B.5. Important Regulatory Provisions that Have an Impact on Foreign Exchange Statistics of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#) available on the BCRA’s website.

⁷ Furthermore, under Communication [A 8226](#), dated April 2025, the BCRA authorized the access to the foreign exchange market for the payment of dividends to non-resident shareholders derived from profits from balance sheets for fiscal years beginning on or after January 1, 2025. In turn, natural and legal persons who have subscribed BOPREAL bonds from Series 3 onwards (see Communication [B 12802](#) of May 2024) may use the US dollars transferred through this bond for the payment of profits and dividends.

II.2. Capital Account

In July, the capital account of the foreign exchange balance recorded net inflows for USD15 million.

II.3. Foreign Exchange Financial Account

In July, the foreign exchange financial account recorded a surplus of USD2,191 million. This result was attributed to the net inflows recorded in the “General Government and the BCRA” (USD2,356 million), the “Financial Sector” (USD1,052 million) and “Other Net Transfers”⁸ (USD1,049 million). These records were partially offset by net outflows from the “Non-Financial Private Sector” (USD2,266 million) (see Table II.3.1).

⁸ The account “Other Net Transfers” consists of foreign exchange transactions not included in the other accounts of the financial account, as well as other transfers that, although not foreign exchange transactions, have an impact on BCRA's International Reserves and/or the institutions' General Exchange Position. For more information about this account, see section C.4.11. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#).

⁹ See the section on [Relevant Regulations](#) for more information on the requirements to access the forex market for natural persons and non-resident investors.

This result is mainly attributed to net purchases of banknotes and transfers of foreign currency for unspecified purposes (USD3,143 million), which were partially offset by net inflows from “Financial Loans and Credit Lines” (USD573 million).

Additionally, net inflows from non-residents’ portfolio investment amounted to USD3,113 million. These transactions, in turn, had as counterpart self-to-self international transfers.¹⁰ Consequently, they had a neutral impact on the financial account balance of the non-financial private sector and a positive impact on that of the public sector.

In July, “Natural Persons” made net purchases of banknotes for unspecified purposes totaling USD2,916 million. In terms of traders, 1.7 million individuals purchased banknotes, with gross purchases totaling USD3,319 million, while about 697 thousand individuals recorded gross sales amounting to USD404 million (see Chart II.3.1.2). In addition, they recorded net outflows for transfers of foreign currency for unspecified purposes totaling USD546 million.

Chart II.3.1.2 Foreign Exchange Balance
Natural Persons. Banknotes. Amount (left) and Number of People (right)

Source: BCRA

In turn, “Legal Persons” made net sales of banknotes and recorded net outflows for transfers of foreign currency transfers for unspecified purposes for a total of USD169 million and USD149 million, respectively.

In terms of the uses and allocation of net outflows of banknotes and foreign currency for unspecified purposes during July (approximately USD3,000 million),¹¹ about USD1,000 million remained deposited in local banks and USD1,000 million increased the foreign assets’ position, whereas about USD900 million were

¹⁰ Self-to-self international transfers consist of crediting foreign currency transferred from abroad to a local account in foreign currency and/or debiting funds deposited locally for their transfer abroad. Inflows are recorded under the transfer heading (positive sign). In addition, there is a second record where the same amount is entered under a negative sign for the crediting of funds in the local account in foreign currency. Contrariwise, a payment abroad from a local account in foreign currency is recorded under the payment heading with a negative sign, and the debit from the account, under a positive sign. Consequently, the total result of self-to-self international transfers in the forex market is neutral. For more information, see section C.4.6. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#).

¹¹ This calculation excludes approximately USD150 million in purchases made by natural persons who purchased banknotes during the month and subsequently transferred foreign currency abroad.

transferred to financial institutions to pay card expenses recorded under “Services and Other Primary and Secondary Income” (see Table II.3.1.2).¹²

Source: BCRA

Net inflows of financial debts from the non-financial private sector totaled USD875 million in July. This amount involves net inflows on account of financial debt held abroad and securities in foreign currency (USD892 million), and loans owed to international organizations (USD84 million), partially offset by net outflows from loans in foreign currency from local institutions (USD101 million)¹³ (see Chart II.3.1.3).

¹² This figure is based on estimates of foreign currency used to make card payments, including: (i) services paid with cards abroad; (ii) changes in domestic debt denominated in foreign currency due to credit card transactions; and (iii) sales of foreign currency aimed at settling balances arising from foreign currency consumptions.

In addition, natural persons that transfer foreign currency abroad without a specific purpose and subsequently purchase securities with such funds (blue chip swap dollar transactions (*dólar contado con liquidación*, CCL)) are identified using information provided by the National Securities Commission (*Comisión Nacional de Valores*, CNV). Given that these natural persons are assumed to use such foreign currency not for holding purposes, but rather to channel the funds to the securities market, they are regarded as potential suppliers of foreign currency in that market.

Thus, net demand is estimated based on information from the CNV and other internal sources. This information suggests that, in the case of natural persons, it is used to build up foreign assets, while in the case of companies, it is used to pay for imports of goods and services, among other uses.

The use of US dollars to pay card expenses recorded under “Services and Other Primary and Secondary Income” does not constitute a foreign exchange transaction, and therefore such payments are not recorded as foreign currency supply in foreign exchange market statistics.

¹³ The total amount excludes purchases of foreign currency to pay card bills for expenses incurred abroad (USD218 million), which do not imply a net demand within the whole system, i.e., the ensemble of institutions and the BCRA. Instead, they are calculated under the heading “Travel, and Other Expenses Paid with Cards” at the time of the transfer abroad.

**Chart II.3.1.3 Foreign Exchange Balance
Non-Financial Private Sector. Financial Debt**

Source: BCRA

Direct investment made by non-residents in the non-financial private sector through the forex market reached USD29 million (net inflows) in July (see Chart II.3.1.4).¹⁴

¹⁴It is worth noting that the repatriation of direct investment by non-residents with access to the foreign exchange market has a neutral effect on foreign currency demand, since applicable regulatory framework requires such transactions to be offset by inflows from financial debt.

II.3.2. Foreign Exchange Financial Account of the Financial Sector

In July, the foreign exchange financial account of the “Financial Sector” recorded a surplus of USD1,052 million. This result was mainly attributed to a fall of USD1,230 million in the holdings of foreign currency assets of institutions’ General Exchange Position,¹⁵ and to net inflows from financial loans and credit lines for USD25 million; which were partially offset by the net subscription of securities in foreign currency for USD215 million.

Institutions’ General Exchange Position amounted to USD8,197 million at the end of July, down 13% against the end of June. This result was explained by a drop in holdings of foreign currency (USD772 million), and of banknotes (USD458 million). Holdings of foreign currency banknotes totaled USD3,806 million by the end of the month and accounted for 46% of the total General Exchange Position. This stock is allocated by institutions to cover local foreign currency deposit transactions and foreign exchange market needs (see Chart II.3.2.1).

¹⁵ The General Exchange Position is defined in section C.4.7. of the [Methodology Used for Compiling Foreign Exchange Market and Foreign Exchange Balance Statistics](#).

**Chart II.3.2.1 Foreign Exchange Balance
Institutions' General Exchange Position**

Source: BCRA

In terms of the position in the forward market, the ensemble of institutions ended July with a short position in foreign currency of USD285 million, recording a drop in their short position of June (USD35 million). This result is explained by a rise in the long position in regulated markets of USD59 million, partially offset by an increase in the short position in Forwards of USD24 million (see Chart II.3.2.2).

In July, foreign capital institutions increased their short position by USD157 million, ending the month with USD510 million, whereas national capital institutions increased their long position by USD192 million, ending the month with USD225 million (see Chart II.3.2.3).

**Chart II.3.2.2 Forward Market
EOM Institutions' Forward Position**

**Chart II.3.2.3 Forward Market
EOM Institutions' Forward Position**

Source: BCRA

The volume traded in forward markets totaled USD33,337 million in July, averaging USD1,587 million daily. Transactions carried out in the A3 Matba-Rofex continued to stand out, with a 78% share in the total volume traded in the forward market (see Chart II.3.2.4).¹⁶

II.3.3. Foreign Exchange Financial Account of the General Government and the BCRA

In July, the foreign exchange financial account of the “General Government and the BCRA”¹⁷ recorded a surplus of USD2,356 million. The result was mainly explained by net inflows of loans from international organizations and other bilateral creditors (other than the IMF) for USD2,798 million, mainly arising from secured loans granted by multilateral organizations to the National Treasury. This result was further supported by inflows from new issuances of Argentine government securities in the local market (USD1,063 million), the sale of locally deposited funds¹⁸ (USD845 million) and net inflows from financial loans

¹⁶ The chart includes the total volume traded in the A3, the transactions arranged by institutions in the Electronic Open Market (*Mercado Abierto Electrónico*, MAE), and with Forwards. This information comes from the Forward Transactions Reporting Scheme (Communication A 4196, as amended) and postings on the website of the A3.

¹⁷ Transactions carried out by the BCRA in the foreign exchange market—whether acting on its own behalf or as an agent of the National Treasury—are not included, since these transactions are recorded under the account “Change in International Reserves due to Transactions” in the Foreign Exchange Balance statistics.

¹⁸ It is a common practice for inflows originating from financial loans, debt securities, and other forms of financing provided to provincial governments and public agencies to be initially deposited in foreign currency accounts at local banks. Once these funds are to be used, they are settled in the foreign exchange market. Consequently, in the Foreign Exchange Balance statistics, these transfers are reflected as follows: on the one hand, outflows are recorded for self-to-self international transfers associated with the inflows; and on the other hand, when the funds are effectively settled in the foreign exchange market, they are recorded as sales of banknotes.

and debt securities (USD368 million). These transactions were partially offset by net outflows related to the payment of principal of sovereign bonds (USD2,628 million).

III. BCRA's International Reserves

During July, BCRA's international reserves increased USD2,729 million, totaling USD47,599 million by the end of the month. The change was mainly explained by net inflows of principal and interest from international organizations (USD2,621 million, mainly arising from secured loans granted by multilateral organizations to the National Treasury), BCRA's purchases of foreign currency in the foreign exchange market (USD2,163 million), inflows from new issuances of Argentine government securities in the local market (USD1,063 million), the increase in institutions' holdings of foreign currency at the BCRA (USD1,307 million), and the increase in the US dollar exchange rate of foreign exchange reserves (USD110 million). These transactions were partially offset by payments of principal and interest on sovereign bonds (USD4,476 million), the sale of foreign currency in the forex market by the National Treasury (USD146 million), and net payments made by the BCRA through the Local Currency Payment System (USD67 million) (see Chart III.1).

Chart III.1 BCRA's International Reserves

Source: BCRA

IV. Volumes Traded in the Foreign Exchange Market

In July, the volume traded in the forex market totaled USD45,978 million, a figure comparable to that of July 2025 (see Chart IV.1). The average daily volume traded was USD2,189 million. However, the volume traded

between the institutions and the BCRA increased by 76%, and that between institutions rose by 11%, while transactions between institutions and their clients contracted by 6%.

**Chart IV.1 Foreign Exchange Market
Volume Traded Daily Evolution**

Source: BCRA

Foreign exchange transactions between institutions and their clients accounted for 68% of the total volume traded, whereas transactions between institutions—through the Electronic Trading System (*Sistema de Operaciones Electrónicas*, SIOPEL)—represented 27%, and those of the BCRA, 5% (see Chart IV.2).¹⁹

In July, there were 104 trading institutions, conducting transactions in 39 different currencies. Most of the volume traded between licensed institutions and their clients was highly concentrated both at institution level (the first ten accounted for 85% of such volume) and in terms of the currency used—USD-denominated transactions having a 97% share in the total traded with clients; followed by euros, which accounted for 2% of the total; with the yuan and the remaining currencies accounting for the rest of the total volume traded (see Chart IV.3).

¹⁹ The volume traded between licensed institutions and their clients excludes the following items: self-to-self international transfers (around USD9,924 million), deposits in foreign currency allocated for the payment of financial debt service (about USD624 million), and purchases of foreign currency to pay card bills (around USD222 million) for the month under study.

**Chart IV.2 Foreign Exchange Market
Total Volume and Share - July 2026**

**Chart IV.3 Foreign Exchange Market
Volume with Clients by Currency - July 2026**

Source: BCRA

Finally, 87% of foreign exchange transactions between financial and foreign exchange institutions and their clients were channeled through private financial institutions, 12%, through public banks, and the remaining transactions through foreign exchange houses and agencies.

Relevant Regulations

On December 13, 2023, under Executive Order [28/2023](#), the Export Increase Program, also known as “80/20” or “blend” dollar came into force. This program targeted the entire exporting sector, both goods and services. This program allowed exporters to settle up to 20% of the foreign currency received from the collection of exports through the stock market, having to settle the rest through the forex market. Foreign currency inflows settled through the stock market were not recorded as collections of exports of goods and services in the foreign exchange market and the foreign exchange balance statistics; except for those proceeds that were kept in local foreign currency accounts (that resulted in self-to-self international transfers, having no net effect on the forex market).

Regarding access to foreign currency for payments for imports of goods with customs registration, Communication [A 7917](#) issued by the BCRA on December 13, 2023, established a staggered system of access according to the type of good or service involved: immediate for hydrocarbons and derivatives and electricity; 30 days for pharmaceuticals inputs from that sector, fertilizers and phytosanitary products; and 180 days for vehicles. For the rest of the goods, payments could be made in four equal and consecutive installments after 30, 60, 90 and 120 calendar days. For further information, see the [Report on the Evolution of the Foreign Exchange Market and the Foreign Exchange Balance](#), December 2023.

In December 2024, the BCRA authorized the access to the Free Foreign Exchange Market (*Mercado Libre de Cambios*, MLC) without prior approval for the payment of compensatory interest accrued as from January 1, 2025, on financial debts with related companies.

[Executive Order 38/2025](#) dated January 27, 2025, established a temporary reduction (until June 30) of export duties on the main goods exported by the agricultural sector (soybean and its by-products, wheat, and corn, among others). Access to this benefit was contingent upon exporters settling at least 95% of the foreign currency generated by these commodities within a maximum of fifteen business days following the corresponding DJVE.

On April 11, 2025, the BCRA launched Stage 3 of the Economic Program. For more information on the implementation of this Stage 3, see BCRA’s publications [here](#) and [here](#), as well as Communications [A 8226](#) and [A 8230](#), and Executive Order [269/2025](#).

Additionally, the launch of Stage 3 implied the lifting of foreign exchange restrictions applicable to natural persons, allowing them to purchase foreign currency in both the forex market and the stock market regardless of the amount involved or the intended use. In addition, the Customs Control and Collection Agency (*Agencia de Recaudación y Control Aduanero*, ARCA)—in coordination with the BCRA—lifted the tax charged on the purchase of foreign currency in the MLC. However, this measure does not extend to credit card expenses incurred abroad, travel and passenger transport expenses. This stage is also supported by a new Extended Fund Facility program (EFF) agreed with the International Monetary Fund (IMF) for an amount of USD20,000 million.

In addition, the Export Increase Program (also known as 80/20 or “blend” dollar) was repealed. After the publication of Executive Order [269/2025](#) on April 14, 2025, all proceeds from the settlement of exports of goods and services were channeled through the forex market, having a direct impact on their statistics. For this reason, it is impossible to conduct an accurate year-on-year comparison of foreign exchange statistics

on the trade of goods and services. In addition, through Communication [A 8226](#), the 90-day restriction stated in Communication [A 7340](#) ("cross restriction") was lifted on a one-time basis, with the aim of streamlining payments for imports and financial debts that might be paid through the bond market (blue-chip swap dollar).

The terms for making foreign trade transactions involving goods and services have been relaxed on April 14, 2025. Now, most of these transactions can be conducted as from the date of customs registration or service provision. As with collections of exports, the values shown in this report on year-on-year variations in payments for imports of goods and in the "Services" account should be understood in light of the regulations introduced between December 2023 and the referenced date above.

In line with these measures, access to the MLC was authorized on April 11 for the payment of dividends to non-resident shareholders derived from profits from balance sheets for fiscal years beginning on or after January 1, 2025. This easing of restrictions complements the measure adopted by the BCRA in December 2024, which authorized the access to the MLC without prior approval for the payment of compensatory interest accrued as from January 1, 2025, on financial debts with related companies.

On April 16, 2025, under Communication [A 8230](#), the BCRA authorized non-resident investors to access the MLC without prior approval for the repatriation of new investment—whether directly or through portfolio investment—made and transferred through the MLC. The investment was initially subject to a six-month minimum holding period, which was eliminated on June 13. See BCRA's publication [here](#), as well as Communications [A 8245](#) and [A 8257](#).

On April 30, 2025, the BCRA approved the issuance of Series 4 of BOPREAL bonds for up to USD3,000 million. The aim of this new issuance was to facilitate the orderly payment of the stock of dividends and profits accrued up to December 2024, and of commercial and financial debt services payable to related institutions, and commercial debts accumulated up to December 12, 2023.

On June 27, 2025, under Executive Order [439/2025](#), the reduction benefit of export duties was extended for certain products such as wheat and barley, along with the mandatory settlement period of the foreign currency (from 15 to 30 business days following the corresponding DJVE), and the settlement percentage was lowered (from 95% to 90%). On July 31, 2025, under Executive Order [526/2025](#), the export duty rates on the main exportable goods, including grains, oilseeds, and meat, were reduced on a permanent basis.

Concerning the access to the foreign exchange market by natural persons, Communication [A 8332](#), issued by the BCRA on September 18, 2025, set forth that executives and shareholders of financial institutions and their family members must sign an affidavit committing themselves not to arrange, directly or indirectly, or on behalf of third parties, purchases of securities settled in foreign currency from the date they request access to the foreign exchange market and for the following 90 calendar days. Subsequently, Communication [A 8336](#), issued on September 26, 2025, extended the provisions of Communication A 8332 to all natural persons.

Executive Order [682/2025](#) was published on September 22, 2025. It sets the export duty rate for grains and meat at 0% where exporters settle at least 90% of the foreign currency within three business days of filing the corresponding DJVE. This provision will be effective either until October 31, 2025, or until the DJVE registration quota reaches USD7,000 million, whichever occurs first. In fact, its validity ended on the afternoon of Wednesday 24, 2025, when the export registration quota was filled.

In October 2025, the BCRA and the US Department of the Treasury announced that they reached a foreign exchange stabilization agreement, which prompts Argentina's macroeconomic stability—particularly by preserving price stability and encouraging sustainable economic growth. The agreement sets forth the terms and conditions for conducting bilateral currency swap transactions between both parties.

On December 10, 2025, a new National Treasury bill denominated in US dollars was issued for USD910 million. After almost eight years, Argentina has returned to the foreign currency financing market with the aim of partially covering external debt payments, allowing for the accumulation of reserves, and contributing to a reduction in country risk.

On December 15, 2025, the BCRA announced the start of a new stage in its monetary policy framework for 2026. Key innovations include the introduction of an international reserves accumulation program and the adjustment of the foreign exchange rate band regime. Both measures will evolve monthly in line with the latest monthly inflation data reported by INDEC (T-2). In short, monetary policy will aim to ensure that money supply aligns with the recovery in money demand, prioritizing liquidity provision through the accumulation of international reserves. Monetary programming will establish a consistent path for monetary aggregates that ensures compatibility between the disinflation process and the buildup of international reserves. For further information, see the announcement [here](#).

Also in December 2025, the BCRA settled its transactions with the US Department of the Treasury (see [note](#)).

In January 2026, the BCRA entered into a reverse repo transaction with international banks for USD3,000 million, supporting Argentina's international reserves, consistent with continued access to market-rate financing instruments. For further information, see the publication [here](#).

Through communication [A 8417](#) dated April 9, 2026, an affidavit is required for natural persons to transfer foreign currency abroad, whereby the client commits not to purchase securities settled in foreign currency for the following 90 calendar days.

On June 30, the BCRA fully refinanced the stock of reverse repo transactions with international banks for USD6,000 million, extending the maturity until September 2028. At the same time, it reduced its cost and broadened participation to new institutions, underscoring international banks' confidence in Argentina's macroeconomic stabilization process and the strengthening of the BCRA's balance sheet. For further information, see the publication [here](#).

Methodology

The information on this report is gathered by the Exchange Transaction Reporting System administered by the BCRA. Additionally, it relies on information on changes in the BCRA's international reserves due to transactions carried out by the BCRA on its own account or on behalf of the National Government, and due to changes in the balance of institutions' foreign currency accounts at the BCRA.²⁰

Data collected from institutions include information on every transaction conducted in the forex market by natural or legal persons (including the sector to which they belong, which agrees with the main business activity reported to the ARCA), amounts traded, currency denomination, and the reason for the foreign exchange transaction (heading)—such as inflows or outflows from exports or imports of goods or services, saving, and financial liabilities, as defined in the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

For further information on the methodological aspects of this report, please read the methodology used for compiling foreign exchange market and foreign exchange balance statistics, which is available [on the BCRA's website](#).

Should you need detailed information about the exchange rate regulations in force, please see the [Consolidated Text on Foreign Trade and Exchange Regulations](#) available on the BCRA's website.

²⁰ Communication A 3840, as amended.
